GR4

OUR PROJECT IS...

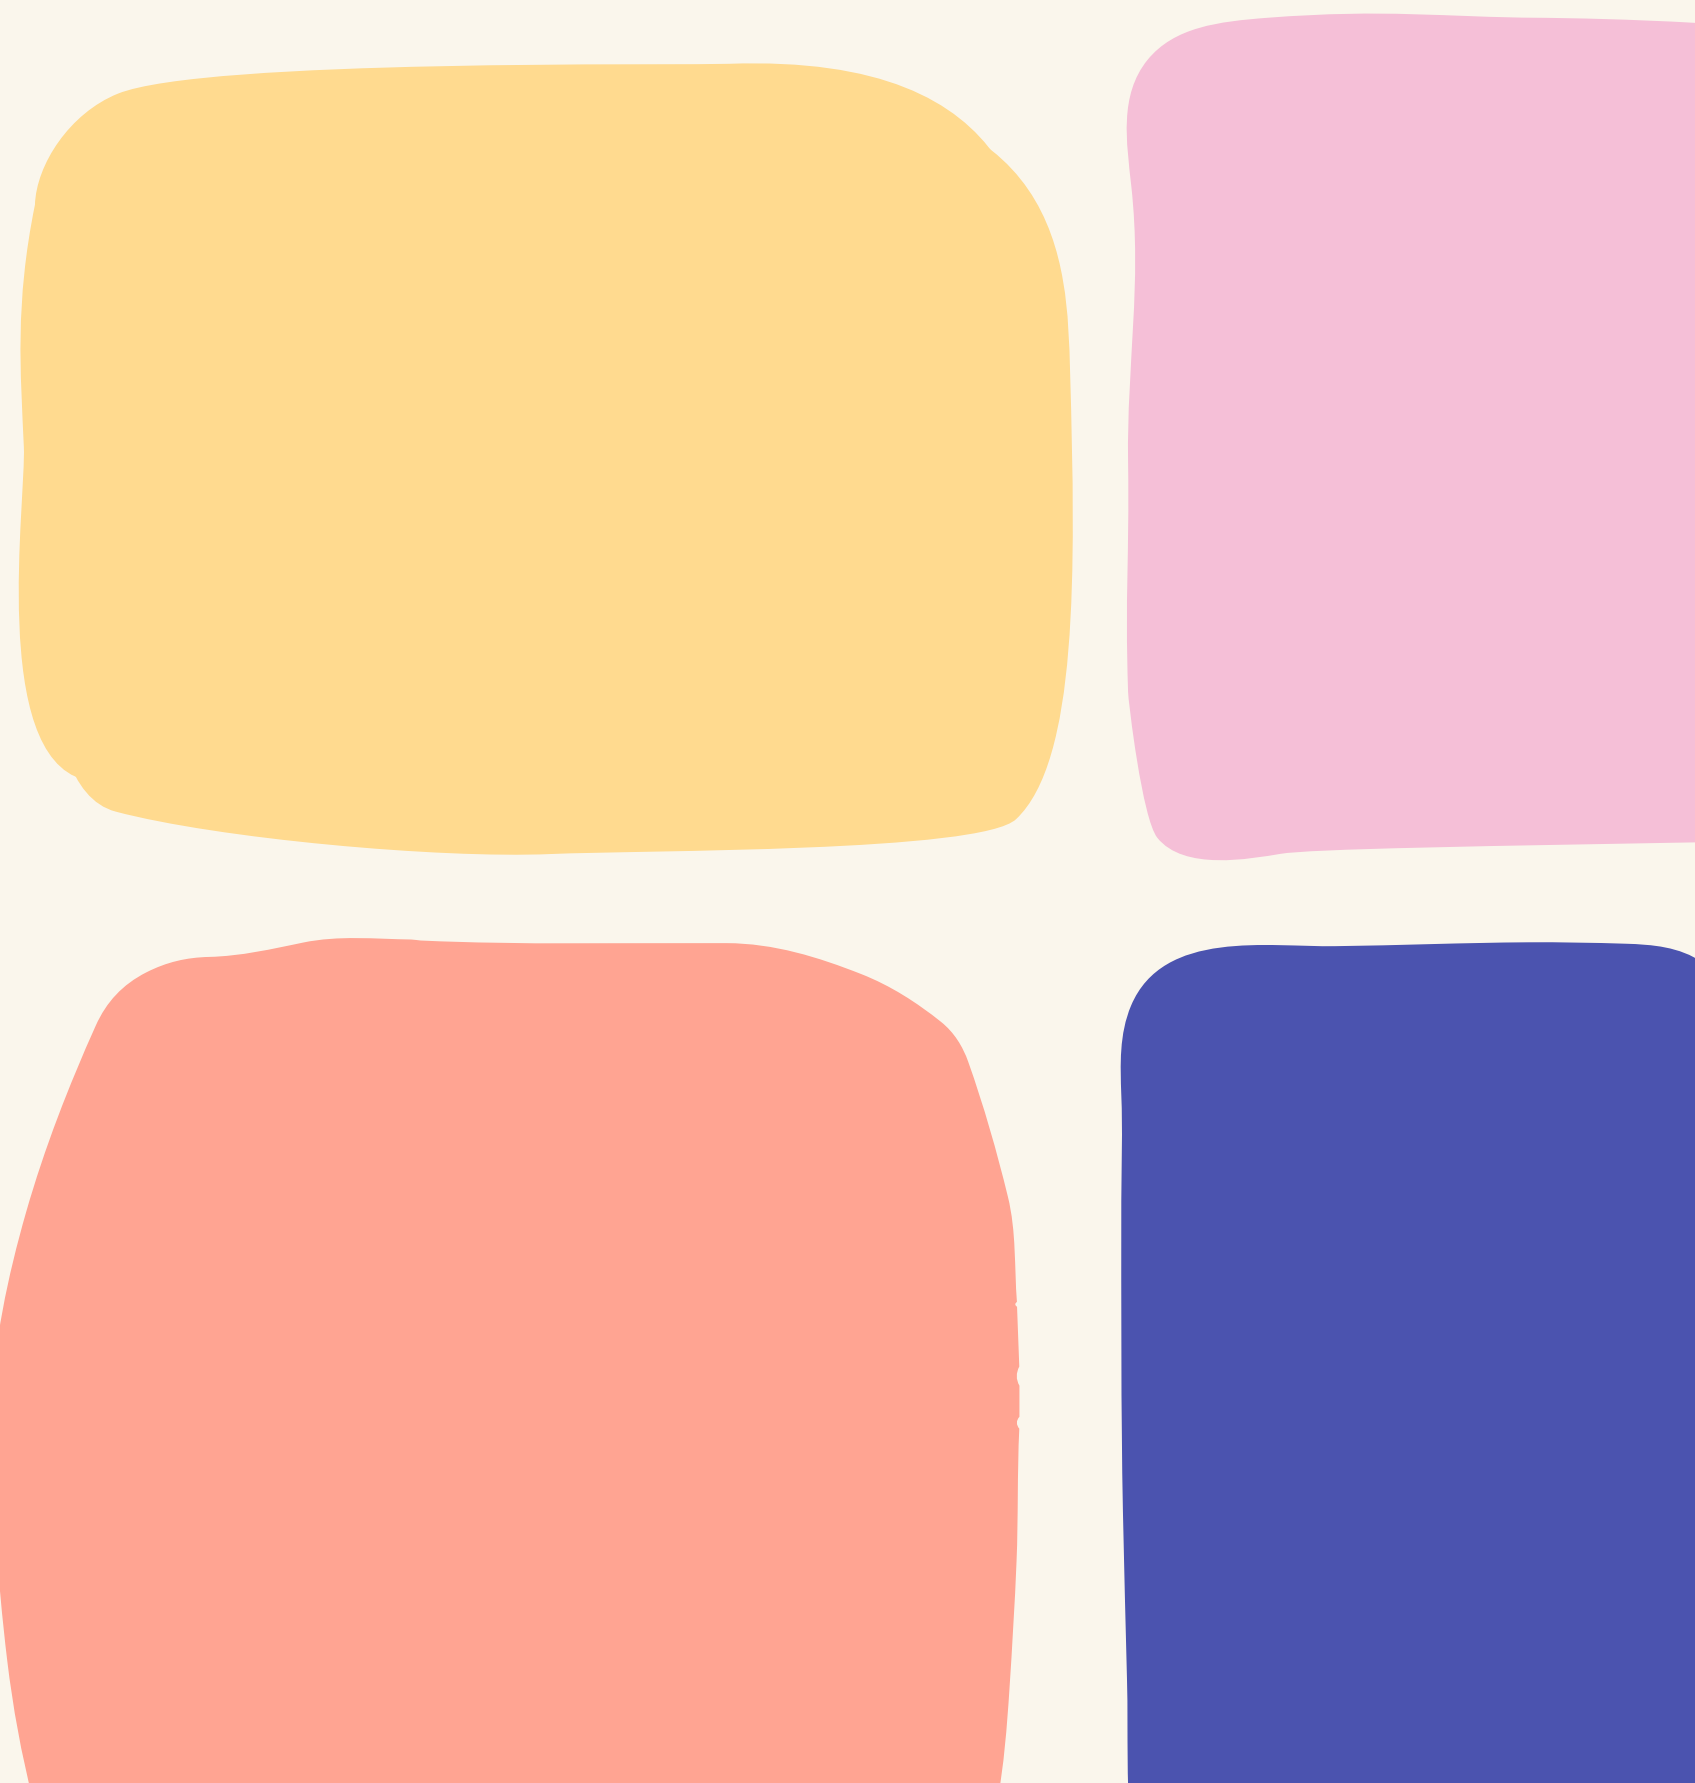

CLIMBSPACE

GR4

ALTROUTE

Different bodies. Different Solutions.

CLIMBSPACE

HOW DID WE ARRIVE AT THE NAME & VALUE PROPOSITION?

AltRoute is short for alternative route.

We wanted to highlight our app's ability to provide different routes for different climbers, allowing climbers to feel included in this community despite not being having the average physique.

CLIMBING TERMS

ROUTE/PROBLEM
A SPECIFIC
CLIMBING PATH SET
ON THE WALL
USING DESIGNATED
COLORED HOLDS.

SEND
A "SEND" IS ACHIEVED WHEN A
CLIMBER FINISHES A CLIMB
WITHOUT FALLING,
REGARDLESS OF WHETHER IT IS
THEIR FIRST TRY OR THEY HAVE
PRACTICED IT BEFORE.

BETA
A CLIMBER'S STRATEGY OR
SEQUENCE OF MOVES FOR
FINISHING A ROUTE.

GR4

OUR PROBLEM SPACE AND SOLUTION

CLIMBSPACE

WHAT'S THE PROBLEM?

Climbers often struggle to find strategies or betas that fit their body types and truly assist them in their climbs.

WHAT'S THE SOLUTION?

Provide tailored betas that match individual physiques and abilities, while also fostering and enhancing their primary enjoyment and satisfaction in the sport: the thrill of problem-solving. (how can we add the autonomy part?)

WHO'S OUR PRIMARY USER?

Beginner to intermediate climbers!

Especially those who don't fit in the average beta setter
physique: male, 5'7, strong

GR4

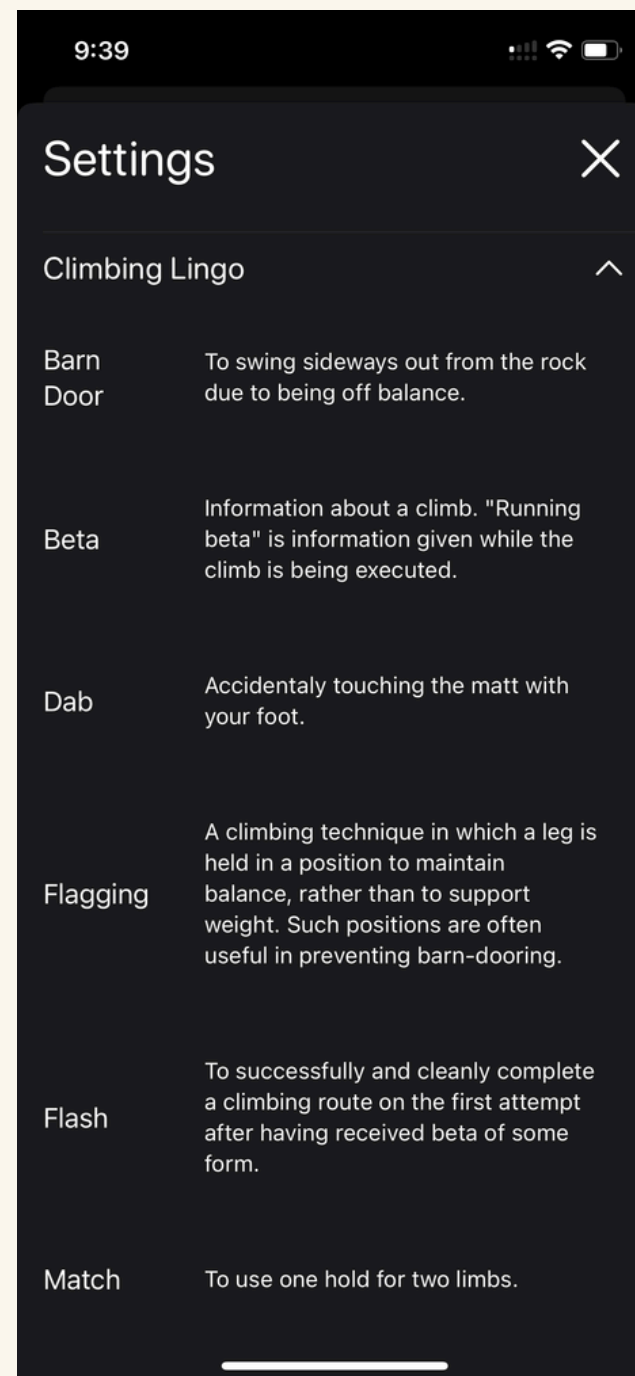

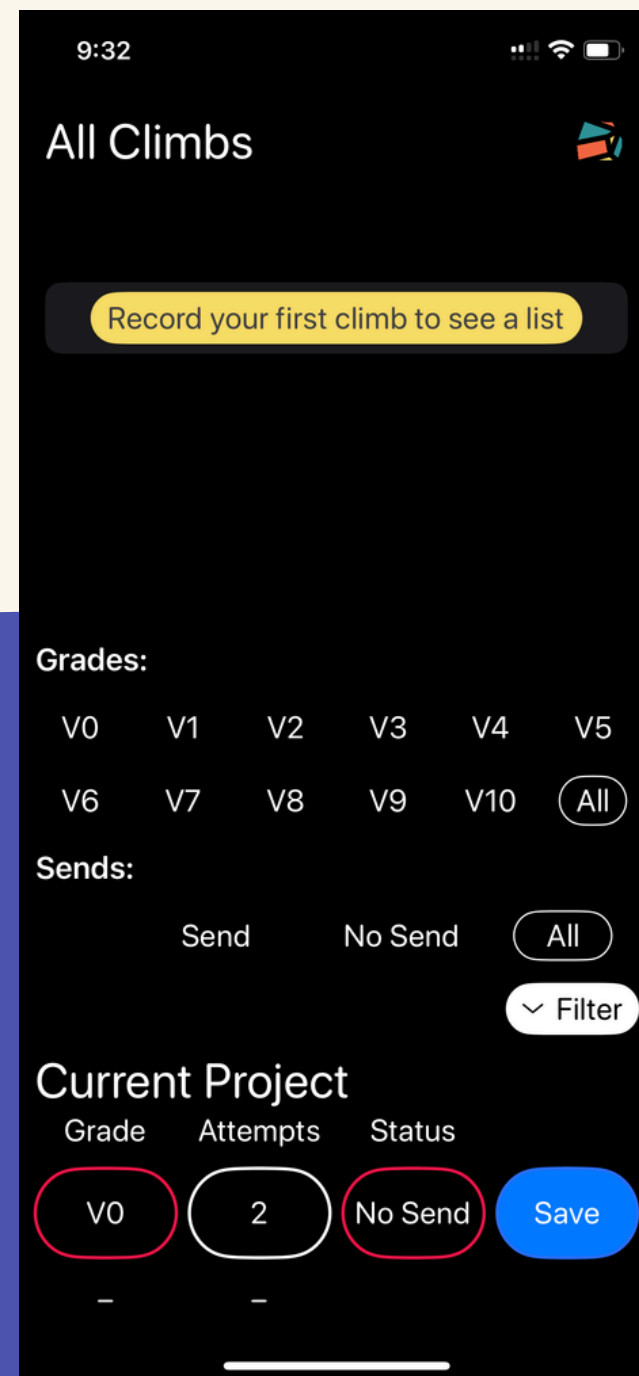

MARKET RESEARCH

CLIMBSPACE

INDOOR CLIMBING

UI example

What it is:

A beginner-friendly climbing app that provides a climbing dictionary and basic attempt logging.

What works:

- Dictionary for beginners to learn climbing terms
- Lets users log attempts and write notes
- Simple idea: track what you tried and how it went

What doesn't:

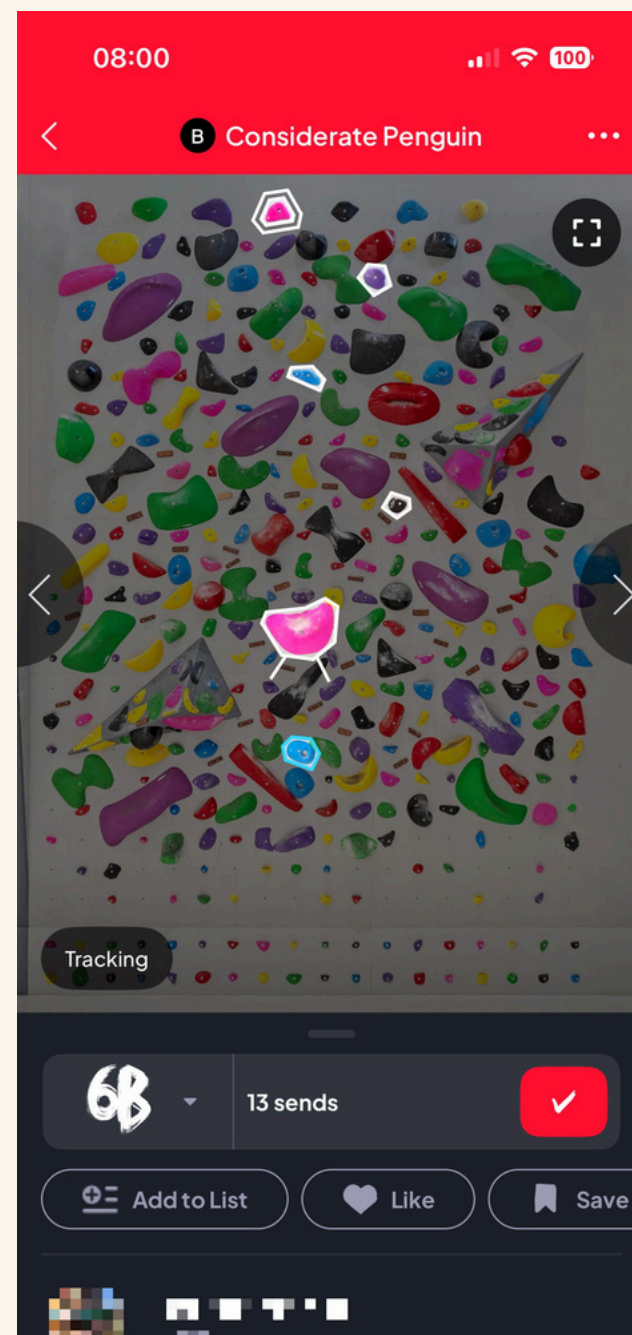

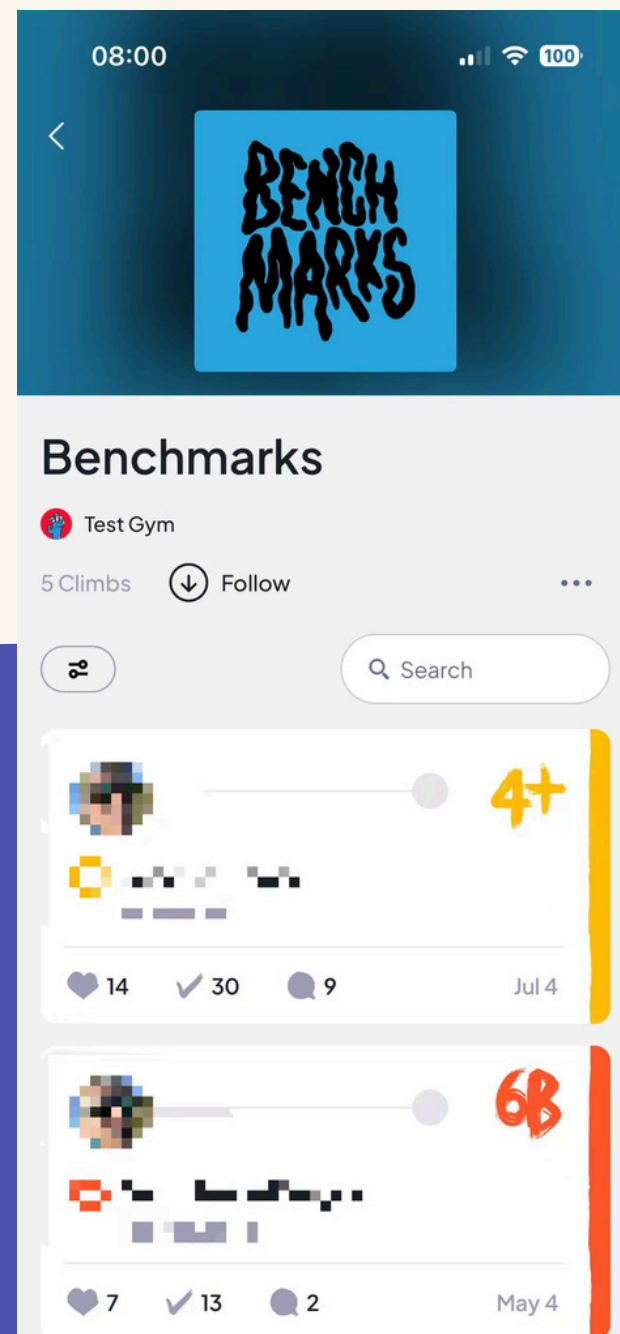

- Logging is too basic: mostly just "success" or "fail"
- Does not specify which gym or which route/problem you tried
- The UI feels confusing and not very intuitive
- Hard to use the log to understand progress or patterns over time

What we learned for AltRoute:

More structured logging (gym + route + beta notes) with a cleaner UI and more helpful guidance.

STOKT CLIMBING

UI example

What it is:

A social climbing community app where users share betas, experiences, and climbing posts.

What works:

- Strong community: easy to learn from others
- Users can share beta videos, tips, and experiences
- Getting inspiration and seeing different solutions

What doesn't:

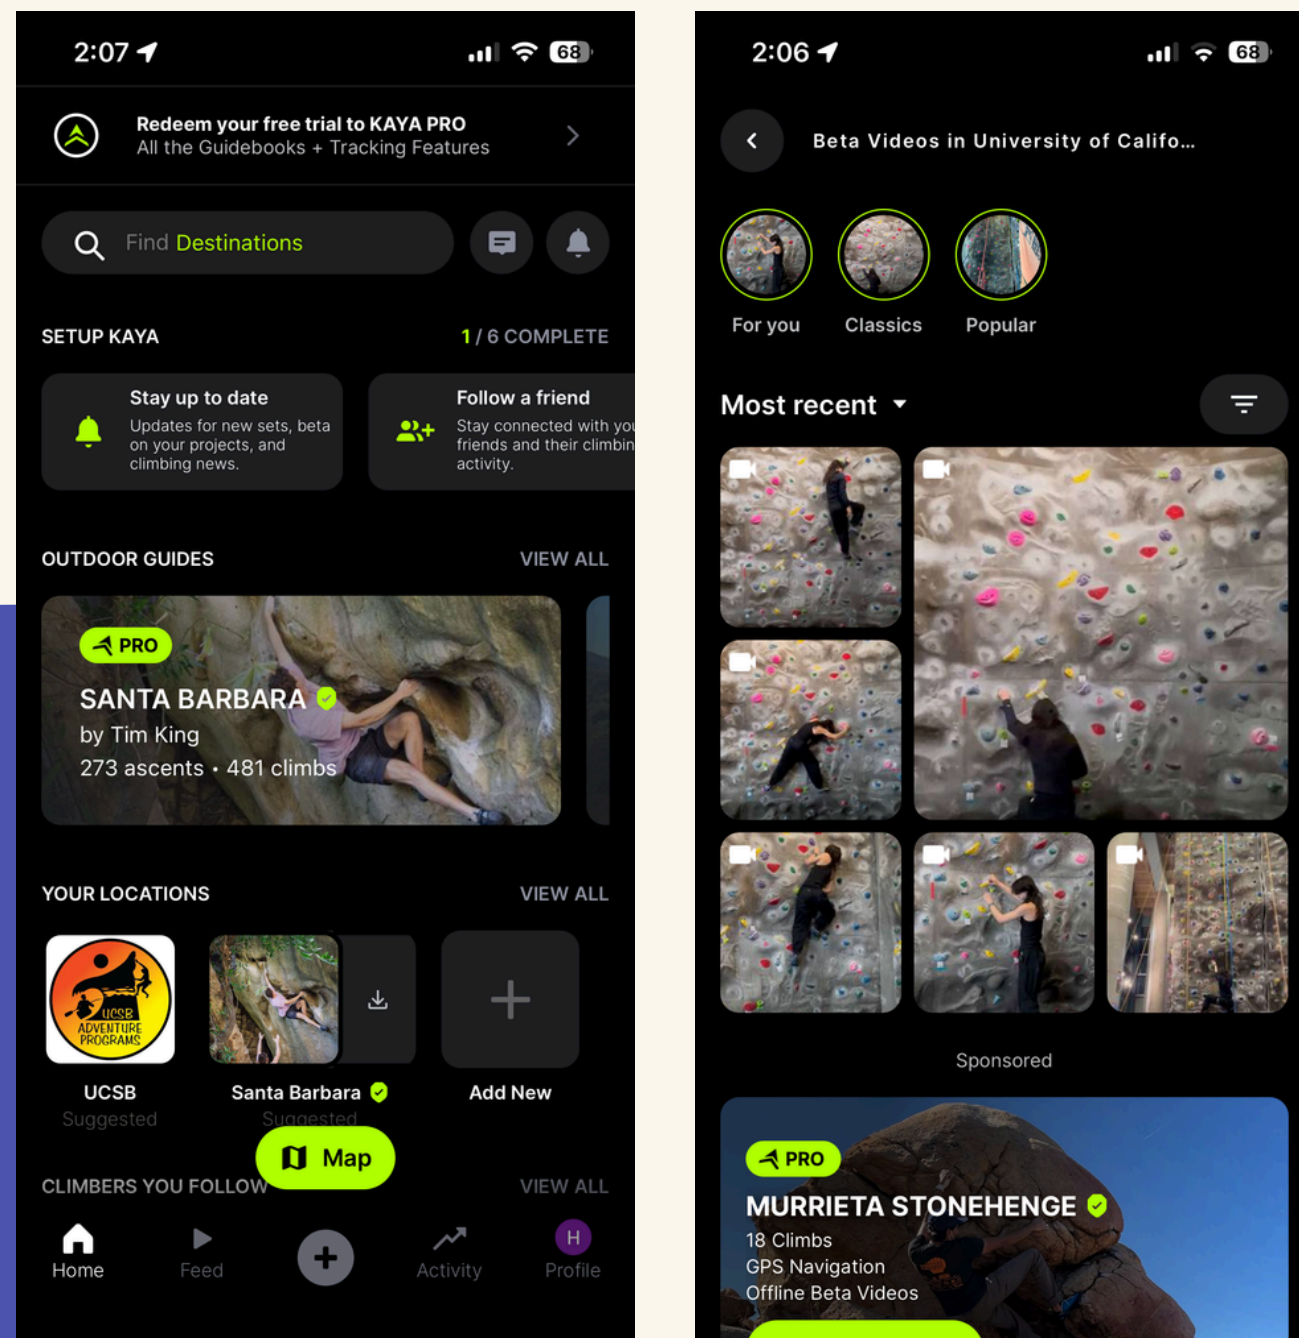

- Content is unstructured, hard to search or filter
- Users may feel stuck when they cannot find a beta that fits their body type
- Lack of guidance, don't know how to use at first
- When a climber feels stuck, the app does not provide a clear "next step"

What we learned for AltRoute:

We need more structured, searchable, and personalized content with UI that provides clear guidance and support when a user feels stuck.

KAYA

UI example

What it is:

A climbing app that includes beta videos, training resources, and filtering options for different climbers.

What works:

- Tries to support different body types by adding filters
- A large amount of climbing content and beta videos
- Useful if there is a beta uploaded that fit your body

What doesn't:

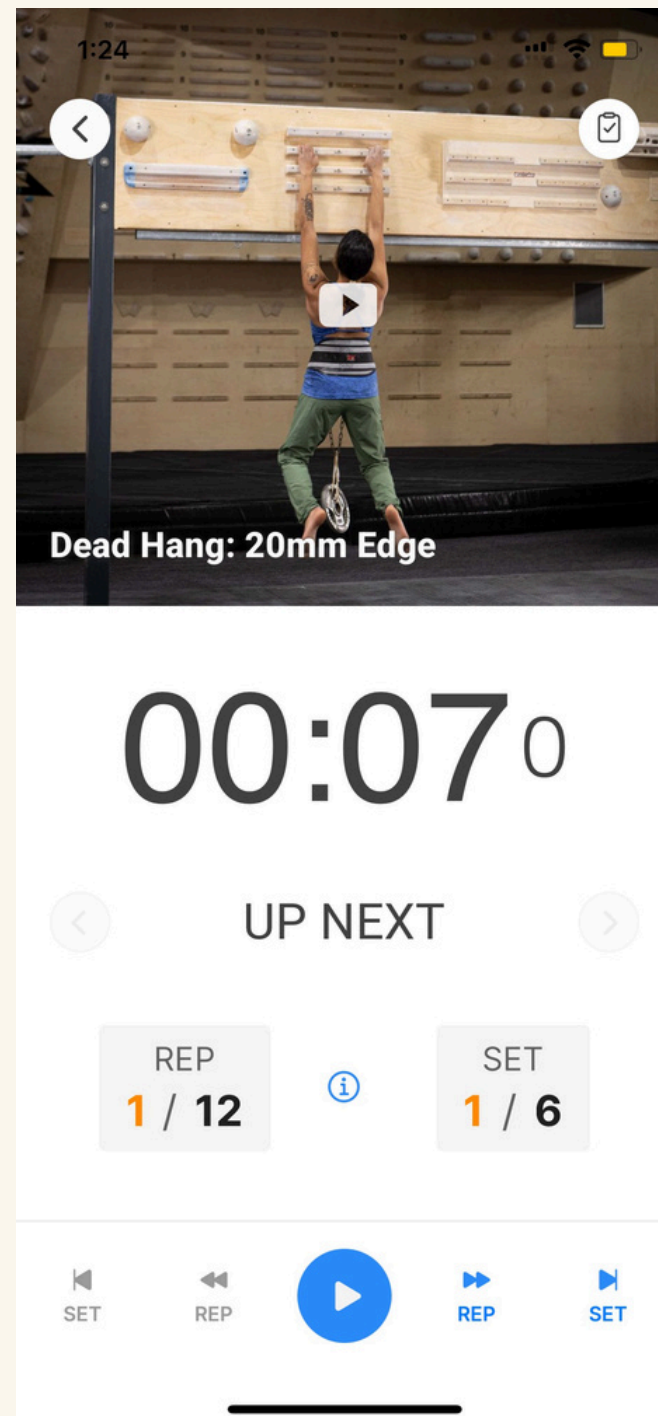

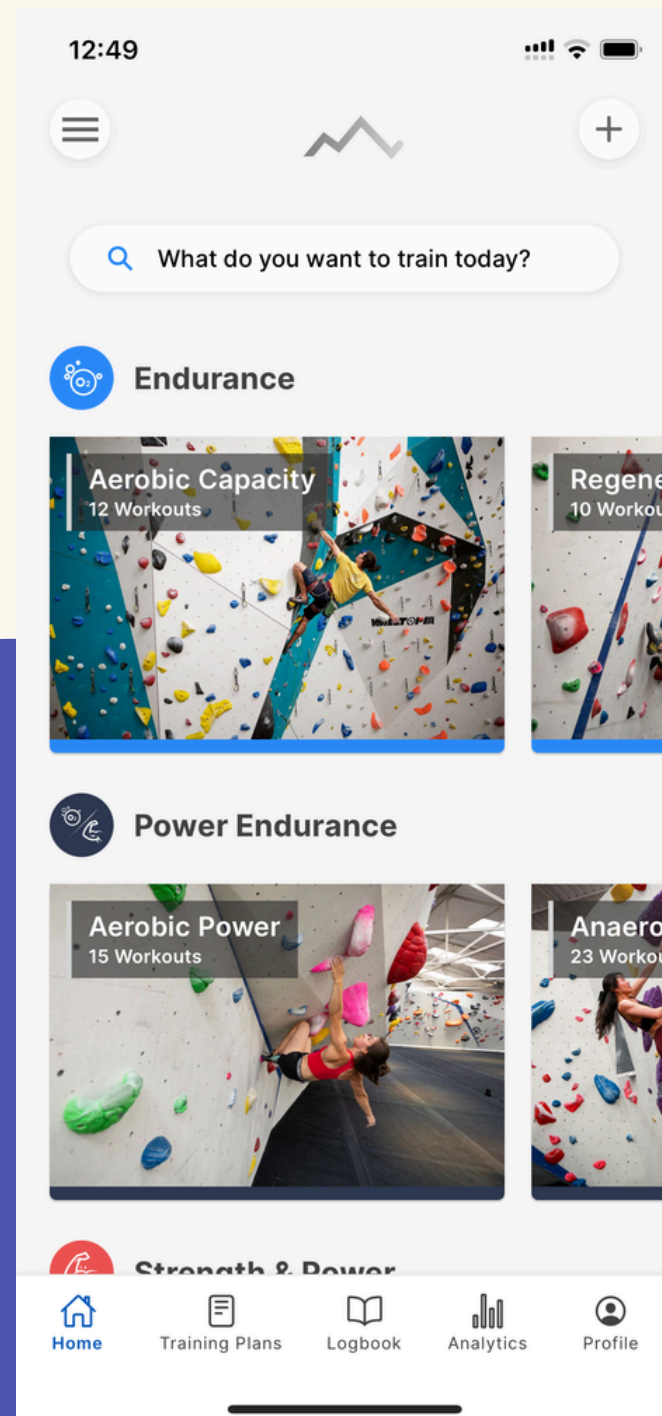

- Personalization depends heavily on whether someone uploaded a beta for your body type
- If no similar beta, the filter doesn't help much
- Some advanced beta content requires payment
- Can feel limiting for users who need a very specific solution

What we learned for AltRoute:

We need a stronger system to provide guidance even when there is no existing beta for a user's body type.

CRIMPD

UI example

What it is:

A climbing training app that provides structured workouts with timers and progress analytics

What works:

- Provides workouts to improve climbing skills
- Includes a timer so users can follow along easily
- Has an analytics page to visualize training progress
- Very clear UI/UX, easy to understand

What doesn't:

- Unable to customize or make changes to the workouts given

What we learned for AltRoute:

ClimbSpace can learn from its design, but our focus should be on beta guidance and personalized problem-solving.

COMPETITIVE FEATURE MATRIX

Competitor Features	ClimbSpace (Our app)	Indoor bouldering	Stokt climbing	Kaya	Crimpd
Body-type personalization	✓	✗	✗	⚠	✗
Structured guidance	✓	✗	✗	⚠	⚠
Community beta sharing	✓	✗	✓	⚠	✗
Progress tracking	⚠	⚠	✗	⚠	✓
Ease of use / UI clarity	✓	✗	⚠	⚠	✓

Legend: ✓ = Strong support ⚠ = Limited / partial support ✗ = Not supported

RECAP OF OUR DIRECTION

IMPROVES ACCESSIBILITY

We help climbers of different body types get useful guidance, instead of “one-size-fits-all” betas.

WHAT WAS OUR SOLUTION?

- Community beta sharing
- AI personalized beta (height/reach/level)
- Multi-beta variations for growth

GR4

TASKS

CLIMBSPACE

SIMPLE

SINGLE MOVEMENT

Users can scroll through betas on a discover page

Reliance on community-shared beta is not enough, but there is still value in looking at others' betas for inspiration.

Time: TBD

MODERATE

USERS HAVE TO INPUT THEIR DETAILS

Users can generate betas using AI by entering their physique, level, and abilities

Using AI, we can create user-specific betas. They can opt for step-by-step reveal so they can still figure out the next steps on their own.

Time:TBD

COMPLEX

USERS HAVE TO RECORD AND LABEL THEIR BETAS

Users can post their betas, noting their physique and level

Sharing their betas can help other climbers, especially those with a similar physique, and enhance their sense of accomplishment

Time:TBD

STORYBOARD

CLIMBSPACE

STORYBOARD

PRODUCTION STORYBOARD - ASPECT RATIO 2:35 PAGE# 1

Scene # Shot #
A wide view of an indoor climbing gym.
A woman on the wall.

Scene # Shot #
The protagonist (average height) attempts
the crux move, reaching for a distant hold. She fails

Scene # Shot #
The protagonist sits on the mat,
slightly hunched, visibly disappointed.

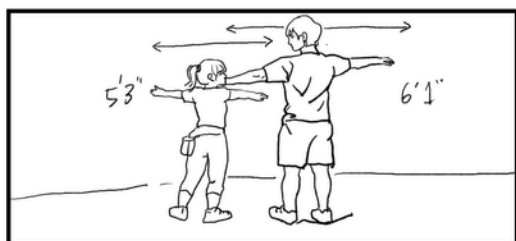

Scene # Shot #
Close up, She takes out her phone and scrolls down,
opens a climbing beta-sharing app.

Scene # Shot #
A video plays on the phone:
a tall climber reaches the hold easily.

Scene # Shot #
The protagonist starts climbing again,
imitating the tall climber's movement. She fails

Scene # Shot #
Full shot- protagonist and tall climber comparing
their wingspan

Scene # Shot #
Close up- She thinks. She looks down at her own hands.
A quiet moment of realization on her face.

PRODUCTION STORYBOARD - ASPECT RATIO 2:35 PAGE# 2

Scene # Shot #
The protagonist sits on the mat and selects
the "AI Beta" feature in the app. She inputs her
physical metrics: height, arm reach, climbing level.

Scene # Shot #
The phone displays a loading screen
while a scanning effect moves across the
climbing wall.

Scene # Shot #
The protagonist follows
the AI's suggested sequence.

Scene # Shot #
She uses a high-step on the micro-foohold,
stabilizing her body.

Scene # Shot #
Close up- click next step button

Scene # Shot #
The protagonist starts climbing again. Next step
narration

Scene # Shot #
She reaches the target hold and tops out smoothly.

Scene # Shot #
Close up- Back on the ground, the protagonist
checks her phone. A prompt asks her to try a
different beta.

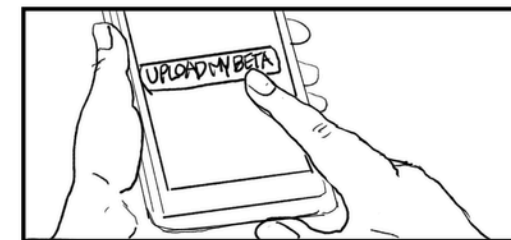

PRODUCTION STORYBOARD - ASPECT RATIO 2:35 PAGE# 3

Scene # Shot #
Montage:
The protagonist intentionally experiments
with different movements on the same path

Scene # Shot #
She performs a move and
successfully reaches the finish.

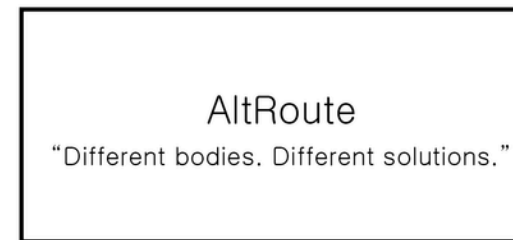

Scene # Shot #
Close up: Her finger taps the
"Upload My Beta" button.

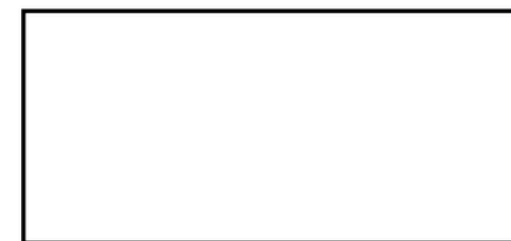

Scene # Shot #
Medium Shot: She smiles looking at her phone

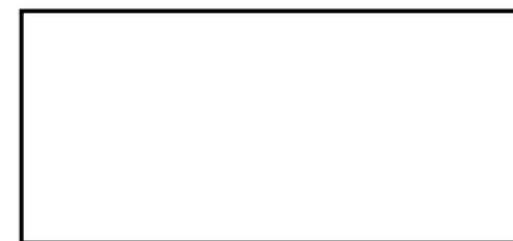

Scene # Shot #
Full shot: She exits the gym with relaxed posture and quiet
confidence.

Scene # Shot #
Logo and slogan

Scene # Shot #
